SUMMARY

Full Stack Developer with hands-on experience in building scalable and responsive web applications using **React.js, Node.js, Express.js, MongoDB, JavaScript, HTML, CSS, and REST APIs**. Passionate about developing user-centric solutions, exploring **Generative AI**, and implementing modern software development practices. Currently expanding expertise in **DevOps**, including **Docker, CI/CD, cloud deployment, and automation**, while strengthening problem-solving skills through **Data Structures and Algorithms**.

EDUCATION

Bachelor of Technology

JSS Academy of Technical Education • Noida , UP • 2027 • 7.56

10+2 Class

Vanita Public School • Varanasi • 2021 • 89%

10th Class

Vanita Public School • Varanasi • 2019 • 82%

PROJECT

Expense Tracker – Premium Personal Finance & Budgeting Platform

[13.20758.126/](#) • June 2026 – Present

- **Developed a full-stack personal finance and budgeting platform** using React 19, Node.js, Express.js, MongoDB, Docker, Kubernetes (K3s), and GitHub Actions.
- **Integrated Generative AI to generate personalized financial insights** by analyzing month-over-month category variance, savings rates, and transaction metrics.
- **Developed secure REST APIs, implemented JWT authentication**, and containerized the application using Docker with a GitHub Actions CI/CD pipeline for automated K3s deployment on AWS EC2.
- **Designed an interactive financial dashboard with real-time analytics**, leveraging GSAP transitions, Recharts visualizations, and a Traefik Ingress controller for routing backend API traffic.
- **Implemented high-availability infrastructure policies** in Kubernetes, configuring Horizontal Pod Autoscalers (HPA) to scale pods dynamically based on real-time CPU and Memory load.

AI Battle Arena

[ai-battle-arena-pi.vercel.app](#) • June 2026 – July 2026

- Developed a full-stack **AI Battle Arena** that compares responses from multiple Large Language Models (LLMs) for user prompts in real time.
- Designed and implemented a **LangGraph-based AI workflow** to orchestrate Mistral and Cohere models, with Gemini acting as an AI Judge for automated evaluation and winner selection.
- Built secure RESTful APIs using **Express.js, MongoDB, and Clerk Authentication** to manage chat sessions, battle history, and follow-up conversations.
- Engineered an AI evaluation pipeline that scores responses, generates detailed reasoning, and determines the best answer based on quality, clarity, and accuracy.
- Developed a responsive and interactive frontend using **React.js, Tailwind CSS, GSAP**, and **Framer Motion**, featuring animated battle visualizations and real-time AI response rendering.

Perplexity — AI Search & Research Engine

[perplexity-weld.vercel.app](#) • March 2026 – April 2026

- **Engineered an AI-powered search and research engine inspired by Perplexity**, combining LLMs with real-time web search to generate contextual, source-grounded answers from dynamically retrieved information.
 - **LLM workflows using LangChain**, integrating prompt engineering, tool calling, web retrieval, and context injection to create an automated **query-to-answer pipeline**.
 - **Integrated Tavily AI Search** as the web-retrieval layer to perform real-time information discovery and return relevant web content for LLM-powered response generation.
 - Developed **RESTful backend services with Node.js and Express.js** for query processing, AI orchestration, search integration, and frontend-backend communication.
 - Built a responsive **React.js interface** for conversational search, dynamically rendering AI-generated answers and supporting source information for improved research and information verification.
-

SKILLS

Programming Languages: JavaScript (ES6+), HTML5, CSS3, C++ , JAVA

Frontend: React.js, Next.js,Typescript, Redux Toolkit, Tailwind CSS, GSAP, Chart.js.

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, Zod Validation.

Database: MongoDB, Mongoose.

AI & GenAI: LangChain, LangGraph, Multi-Agent AI Workflows , Retrieval-Augmented Generation (RAG), Google Gemini API.

DevOps & Cloud: Docker, GitHub Actions, Linux, AWS, Render, Vercel, Kubernetes, Terraform

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Authentication & Authorization, CRUD Operations, API Integration, Responsive UI Development, Performance Optimization.
